

COMPUTING HONOURS PROJECT (COMP10034)

Marking Sheet for Interim Reports

Please mark the Interim Reports out of 100%.

Assessment of the Interim Report

Student Name: **Corey Black** Banner ID: **B01651145**

Campus: **Paisley**

The marking scheme for the Interim Report is as follows:

Criteria	Max Mark	Assigned Mark
Background/Literature Review and Referencing	40	20
Preliminary Work/Creative Accomplishments	40	18
Progress and Further Planned Work	10	6
Structure, Presentation, Style of the Report	10	6
Total Marks		50

Agreed Mark with the Moderator: **50** (out of 100%)

Student Feedback (Supervisors only)

Supervisor: **Pablo Salva-Garcia**

Background/Literature Review and Referencing

In the introduction, please make clearer what's the aim of the project and list the objective using bullet points or a numbered list, this will make easier to understand current progress and for later, for your final thesis to discuss whether the objectives have been met. For section 3, While relevant topics are introduced, the discussion remains largely descriptive, with limited comparison between sources or clear articulation of gaps that the project intends to address. To strengthen this section, the review should be expanded to include more peer-reviewed literature, clearer critical analysis of existing solutions or approaches (have you found similar research works? What the literature says about how to measure different frameworks (methodology)? and a more explicit link between the reviewed work and the project's technical and design decisions.

Preliminary Work/Creative Accomplishments

The report outlines early planning and conceptual work, but there is limited concrete evidence of completed technical or creative implementation at this stage. Architectural intentions and tool choices are described, however these are not sufficiently supported by code snippets, screenshots, diagrams, or early prototypes. This makes it difficult to assess the level of practical progress achieved so far. Needs more description on what's the "standardise application" you are using, while the database is more or less described, what's the actual application's flow? Including application steps would improve this part. Also, some performance metrics are mentioned but these need much more explanation, why those ones? What are the challenges? What are you actually analysing to decide which framework performs better and why?

Progress and Further Planned Work

The report provides a general sense of intended next steps, but the current project status and remaining work are not clearly distinguished. While future plans are outlined, they would be more effective if explicitly grounded in what has already been completed and structured into realistic, prioritised milestones. Including a clearer timeline or mapping progress against planned stages would help demonstrate feasibility and reassure that the project is on track for completion.

Structure, Presentation, Style of the Report

The report follows a basic academic structure and is generally understandable, but it requires refinement to improve clarity, coherence, and academic tone. Some sections would benefit from tighter organisation and clearer identification, while language occasionally becomes informal or repetitive.

Overall note: *After reading this report, it is still unclear why these frameworks are being analysed, which tools are being used, and how their performance is being evaluated, where is the real methodology? Please ensure that you schedule sufficient supervisory meetings to receive feedback and guidance.*

Moderator's comments:

Dr. Sajjad Bagheri

I agree with the assigned marks and feedback.

Additional feedback: The report is entirely plain text, disorganized, and contains insufficient detail. You should include visual elements such as charts, diagrams, and flowcharts to improve clarity. The references are very limited and not the appropriate format. All figures and tables should be numbered, labeled, cited and clearly explained within the text.
